

has a side recess and the rotary brush part at the rotary brush head thereof has a fitting hole; and a rotary rod, wherein said rotary rod, at an end thereof extends a crank arm to pass through the push groove and be received in the base hole so that the rotary brush head can be rotated during the push stem moving forward and backward, and wherein said rotary rod further has another portion which is received in said rotary brush head.

10 **Claim 2 (Amended):**

The complex type toothbrush as defined in claim 1, wherein an area at the base hole [is a hunched up] comprises a base ridge.

15 **Claim 3 (Canceled):**

Claim 4 (Amended):

The complex type toothbrush as defined in claim 1, wherein [both] the base, [and brush seat] at two lateral sides thereof, [extend] includes a baffle respectively corresponding to the rotary brush head.

Claim 5 (Amended):

The complex type toothbrush as defined in claim 1, wherein the brush seat [surrounding an periphery thereof] has a reduced insert part fitting with the base.

Claim 6 (Canceled):

30 **Claim 7 (Canceled):**
